Dear Viettel team,

As you know we have some issue with DRM Catch up when trying to register using Catchup to VOD function
--> That content is not marked as Encrypted
--> IOS device can not play.

We proposed temporary solution before having a permanent fix:

1. Create new account on CMS-MM

useradd adi

passwd adi

-> input: adi

mkdir -p /home/adi/TEMP

2. Change CMS-MM config to point SDP FTP ip to local:

vim /castis/bin/CMSAdmin/cms-config/config.properties

.....

#system.deploySdpRequestFtp.host=172.23.1.232

system.deploySdpRequestFtp.host=127.0.0.1

3. Copy script to CMS-MM servers from TEST BED.

Server: TESTBED-CMS

PATH:

- + /home/vt_admin/validate_xml/watch_folder.sh
- + /home/vt_admin/validate_xml/list_encrypted_channel

==> Copy to same path on CMS-MM

4. Put the script into crontab.

echo " * * * * root /home/vt_admin/watch_folder.sh 2>> /castis/log/monitor_adi.log " >> /etc/crontab**

5. Restart tomcat cms server on CMS-MM.

If you have any question, please feel free to ask me.

Thank you and best regards,

Vu Ngo
